Physics 2 for OCR	[Textbook by Gurinder Chadha and David Sang]	
	ISBN	978-0-521-73830-9

Unit 2	FIELDS, PARTICLES AND FRONTIERS OF PHYSICS

		Page	
Chapter 8	ELECTRIC FIELDS	103	
	Attraction and repulsion	103	
	The idea of positive and negative	104	
	Investigating electric fields	104	
	Representing electric fields	105	Q1-3
	Electric field strength	106	
	The strength of a uniform field	107	
	Worked example 1	108	
	Worked example 2	108	Q4-6
	Force on a charge	109	Q7-10
	Coulomb's law	111	
	Investigating Coulomb's law	112	
	Electric field strength for a uniform field	112	
	Worked example 3	113	Q11-12
	Comparing gravitational and electric fields	113	Q13
	Summary	115	
	Questions 1 -4	115	

		Page	
Chapter 9	MAGNETIC FIELDS	120	
	Magnets and currents	120	
	Field direction	121	Q1-3
	Magnetic force / Fleming's left-hand rule	122	Q4
	Magnetic flux density	124	
	Determining magnetic flux density	124	
	Currents crossing fields	125	
	At right-angles	125	
	Worked example 1	125	Q5-7
	At an angle other than 90 degrees	126	
	Worked example 2	127	Q8
	Moving particles	127	
	Observing the force	127	
	Using electron beams	128	Q9
	The magnetic field on a moving charge	129	Q10-11
	Orbital charges	130	
	Worked example 3	130	Q12-14
	Electric and magnetic fields	131	Q15
	Mass spectrometer	133	Q16
	Summary	135	
	Questions 1 -4	135	

Unit 2	FIELDS, PARTICLES AND FRONTIERS OF PHYSICS

		Page	
Chapter 10	ELECTROMAGNETIC INDUCTION	139	
	Generating electricity	139	
	Explaining electromagnetic induction	140	
	Cutting magnetic field lines	140	Q1
	Current direction / Fleming's right-hand rule	141	
	Induced e.m.f.	142	Q2-3
	Magnetic flux and magnetic flux linkage	143	
	Worked example 1	144	Q4-10
	Faraday's law of electromagnetic induction	145	
	Worked example 2	145	
	Worked example 3	146	Q11-15
	Lenz's law	147	
	The origin of electromagnetic induction	147	
	Forces and movement	148	Q16-17
	A general law for induced e.m.f.	149	Q18-19
	Using induction: a.c. generator	150	Q20-22
	Using induction: transformers	151	Q23
	Step up, step down / turns-ratio equation	152	
	Worked example 4	152	Q24-25
	Greener power transmission	153	
	Summary	154	
	Questions 1 -3	136	

		Page	
Chapter 11	CAPACITORS	158	
	Using capacitors	158	
	Stored charge	159	
	The meaning of capacitance	159	
	Units of capacitance	159	
	Other markings on capacitors	159	Q1-4
	Energy stored in a capacitor	160	
	Investigating energy stored	160	Q5-8
	Deriving W = QV/2	161	Q9-10
	Capacitors in parallel	163	Q11-12
	Capacitors in series	163	
	Worked example 1	164	Q13-14
	Comparing capacitors and resistors	164	Q15
	Capacitor networks	165	Q16-19
	Sharing charge, sharing energy	166	
	Worked example 2	166	Q20-21
	Capacitor discharge / exponential decay	167	
	Analysing the discharge graphs	168	Q22
	Looking at gradients and areas	169	Q23
	Discharge equations	169	
	Worked example 3	170	Q24
	A general equation	170	Q25-26
	Time constant	171	Q27-30
	Capacitors at work	172	
	Summary	173	
	Questions 1 - 4	174	

Unit 2	FIELDS, PARTICLES AND FRONTIERS OF PHYSICS

		Page	
Chapter 12	ATOMIC STRUCTURE	178	
	Looking inside the atom	178	
	Alpha-particle scattering and the nucleus	178	
	Explaining alpha-scattering	180	Q1-2
	A simple atom model	181	
	The scale of things	181	
	Nuclear density	181	Q3
	Nucleons and electrons	182	Q4-5
	Isotopes	183	Q6-10
	Forces in the nucleus	186	
	Diluting the protons	186	Q11
	Fundamental particles?	187	
	Families of particles (Hadrons & leptons)	188	
	Inside hadrons	188	
	Particle properties	189	
	Worked example 1	190	
	Evidence for quarks	190	
	Summary	191	
	Questions 1 - 4	191	

		Page	
Chapter 13	NUCLEAR PHYSICS	193	
	Nuclear processes	193	
	Nuclear fission	193	Q1-4
	Nuclear fusion	194	Q5-6
	Explaining fission and fusion	195	
	Mass and energy	196	
	Einstein's mass-energy equation	196	
	Worked example 1	197	
	Mass-energy conversion	198	Q7-9
	Binding energy and stability	199	
	Worked example 2	199	Q10-11
	Binding energy , fission and fusion	201	Q12
	Nuclear power	201	
	Inside a fission reactor	202	
	Nuclear waste	203	Q13-14
	Summary	204	
	Questions 1 - 3	205	

Unit 2	FIELDS, PARTICLES AND FRONTIERS OF PHYSICS

		Page	
Chapter 14	RADIOACTIVITY	206	
	Discovering radioactivity	206	
	Radiation from radioactive substances	206	
	Discovering neutrinos	207	
	Fundamental families	208	
	Fundamental forces	208	Q1
	Balanced equations	208	
	Worked example 1 (alpha decay)	208	
	Worked example 2 (beta decay)	208	Q2-3
	Energy released in radioactive decay	209	Q4
	Properties of ionising radiation	209	Q5
	Electric and magnetic fields	210	Q6-7
	Radiation penetration	211	
	Alpha-radiation	211	
	Beta-radiation	212	
	Gamma-radiation	212	Q8-9
	Randomness and decay	213	
	Spontaneous decay	213	
	Decay constant, λ	214	
	Activity, A	214	
	Worked example 3	215	
	Worked example 4	215	
	Count rate	215	Q10-12
	Decay graphs and equations	216	
	Determining half-life	217	
	Mathematical decay	217	
	Worked example 5	217	
	Worked example 6	218	Q13-15
	Carbon-dating	219	Q16
	Decay constant and half-life	220	Q17-21
	Summary	221	
	Questions 1 - 5	222	

		Page	
Chapter 15	X-RAYS	226	
	Medical diagnosis	226	
	The nature and production of X-rays	226	
	X-ray tube	227	
	X-ray spectrum	228	Q1-3
	Braking radiation (Bremsstrahlung)		
	X-ray attenuation	229	
	Decreasing intensity	229	
	Worked example 1	230	
	Absorption mechanisms	230	
	Photelectric effect	230	
	Compton scattering	230	
	Pair production	231	Q4-6
	Improving X-ray images	232	
	Dectection systems	232	
	Improving contrast	233	Q7
	Computerised axial tomography	234	
	Advantages of a CAT scan	235	Q8-9
	Summary	236	
	Questions 1 - 5	236	

Unit 2	FIELDS, PARTICLES AND FRONTIERS OF PHYSICS

		Page	
Chapter 16	DIAGNOSTIC METHODS IN MEDICINE	238	
	Using radioisotopes	238	
	Choosing a radionuclide	239	
	Radiopharmaceuticals	239	Q1
	The gamma camera / photomultiplier tubes	240	
	Uses of the gamma camera	241	Q2
	Poistron emission tomography Positron-electron annihilation	242	
	PET scanner	242	
	Uses of PET scanning	243	Q3-4
	Magnetic resonance imaging	243	
	Principles of nuclear magnetic resonance Larmor frequency / relaxation time	244	Q5-6
	MRI Scanner	246	
	Procedure	246	
	Advantages and disadvantages of MRI	247	Q7
	Summary	248	
	Questions 1 - 3	220	

		Page	
Chapter 17	USING ULTRASOUND IN MEDICINE	250	
	Family photos	250	
	Working with ultrasound	250	
	Producing ultrasound	251	
	Detecting ultrasound	251	Q1-2
	Echosounding / acoustic impedance	252	
	Calculating reflected intensities	253	
	Worked example 1	253	
	Comparing acoustic impedances	254	Q3-6
	Ultrasound scanning	254	
	A-scan	254	
	Worked example 2	255	
	B-scan	255	Q7-8
	Doppler ultrasound	256	Q9-10
	Summary	258	
	Questions 1 - 3	258	

Unit 2	FIELDS, PARTICLES AND FRONTIERS OF PHYSICS

		Page	
Chapter 18	THE NATURE OF THE UNIVERSE	261	
	The cosmological principle	261	
	The life of stars	262	
	The birth, life and death of the Sun	262	
	The ageing Sun White Dwarf / Pauli's exclusion principle	264	
	More massive stars / black hole	265	
	Worked example 1	266	Q1-3
	Measuring the universe / the parsec	267	
	Worked example 2	268	Q4-7
	Olbers' paradox	269	
	The expanding universe / Doppler equation	270	
	Hubble's law	271	
	Interpreting Hubble's law	272	Q8-9
	The birth of the unverse	273	
	Changing units	273	
	The age of the universe	273	Q10
	Summary	274	
	Questions 1 - 5	275	

		Page	
Chapter 19	THE EVOLUTION OF THE UNIVERSE	277	
	The standard model of the universe	277	
	Back to the beginning	277	
	The evolving universe	278	
	Evidence for the standard model Cosmic background radiation	279	Q1-2
	The future of the universe	281	
	The geometry of the universe	282	
	Which future?	282	
	Does the universe have a density as low as this?	283	Q3-4
	Summary	284	
	Questions 1 - 3	284
