Physics 1 for OCR	[Textbook by Gurinder Chadha and David Sang]	
	ISBN	978-0-521-72455-5

Unit 1	MECHANICS

		Page	
Chapter 1	KINEMATICS - DESCRIBING MOTION	1	
	Describing movement	1	
	Speed	1	Q1
	Units	2	Q2-3
	Determining speed	2	
	Laboratory measurements of speed	2	
	Using two light gates	3	
	Using one light gate	3	
	Drive slower, live longer	3	
	Using a ticker-timer	4	
	Using a motion sensor	4	
	Choosing the best method	4	Q4-6
	Distance and displacement, scalar and vector	5	
	Speed and velocity	5	Q7
	Speed and velocity calculations	6	
	Worked example 1	6	
	Worked example 2	6	
	Making the most of units	7	Q8-9
	Displacement against time graphs	7	Q10-11
	Deducing velocity from a displacement against time graph	8	Q12-13
	Summary	9	
	Questions 1 & 2	10	

		Page	
Chapter 2	ACCELERATED MOTION	11	
	Defining acceleration	11	
	The meaning of acceleration	11	
	Calculating acceleration	12	
	Units of acceleration	12	Q1-3
	Worked example 1	12	
	Worked example 2	12	
	Worked example 3	12	
	Describing motion using graphs	13	
	Deducing acceleration	13	
	Deducing displacement	14	Q4-6
	Measuring velicity and acceleration	15	
	Determining velocity and acceleration in the laboratory	15	
	One light gate	15	
	Using a ticker-timer	16	
	Using a motion sensor	16	
	Accelerometers	16	Q7-9
	The equations of motion	17	
	Worked example 4	18	
	Worked example 5	18	
	Worked example 6	19	
	Worked example 7	19	Q10-12
	Deriving the equations of motion	20	
	Equation 1 / Equation 2 / Equation 3	20	
	Equation 4	21	
	Investigating road traffic accidents	21	Q13-14
	Uniform and non-uniform acceleration	21	Q15-20
	Summary	24	
	Questions 1 - 3	25	

Unit 1	MECHANICS

		Page	
Chapter 3	DYNAMICS - EXPLAINING MOTION	27	
	Force and acceleration	27	
	Force and acceleration	27	
	Calculating the acceleration	27	
	Force, mass and acceleration	28	
	Worked example 1	28	
	Worked example 2	29	Q1-3
	Defining the newton	29	Q4
	Acceleration caused by Gravity	29	
	Large and small	30	
	On the Moon	30	
	Mass and weight	31	
	Gravitational field strength	32	Q5-7
	Determining g	32	
	Method 1: Using an electronic timer	32	
	Sources of uncertainty	33	
	Method 2: Using a ticker-timer	34	
	Method 3: Using a light gate	34	
	Worked example 3	34	Q8-10
	Mass and inertia	35	
	Observations and ideas	35	
	From Galileo to Einstein	36	
	The idea of inertia	37	Q11-12
	Top speed	37	
	Balanced and unbalanced forces	38	
	Free fall	38	
	Moving through fluids	39	
	Moving through air	39	
	Worked example 4	40	
	Worked example 5	40	Q13-15
	Summary	41	
	Questions 1 - 3	41	

		Page	
Chapter 4	WORKING WITH VECTORS	43	
	Magnitude and direction	43	
	Combining displacements	43	
	Worked example 1	43	
	Worked example 2	44	Q1
	Combining velocites	45	
	Worked example 3	45	Q2
	Combining forces	45	
	Two forces in a straight line	46	
	Two forces at right angles	46	
	Three or more forces (Triangle of forces)	47	
	Vector addition	47	Q3-5
	Components of vectors	48	Q6
	Making use of components	49	
	Changing the slope	50	Q7-8
	Solving problems by resolving forces	50	
	Worked example 4	51	Q9
	Projectiles	52	
	Understanding projectiles	52	
	Up and down	52	
	How high?	53	
	How long?	53	
	Falling further	53	Q10-11
	A curved trajectory	53	
	Worked example 5	55	Q12
	Summary	55	
	Questions 1 - 5	56	

Unit 1	MECHANICS

		Page	
Chapter 5	FORCES, MOMENTS AND PRESSURE	59	
	Experiencing forces	59	
	Some important forces (Table on page 60)	61	
	Two or more forces	61	Q1-3
	Centre of gravity	61	
	Finding the centre of gravity	61	
	The turning effect of forces	62	
	Moment of a force	62	
	Methods to calculate the moment of a force	63	
	Balanced or unbalanced?	63	
	Worked example 1	63	
	Worked example 2	64	
	Worked example 3	64	Q4-8
	The torque of a couple	66	Q9
	Pure turning effect	67	
	Density	67	
	Pressure	67	Q10-11
	Summary	68	
	Questions 1 - 4	69	

		Page	
Chapter 6	FORCES, VEHICLES AND SAFETY	71	
	Stopping distances	71	
	Stopping safely (Highway Code)	72	Q1-3
	Factors affecting stopping distances	73	Q4
	Car safety features	74	
	Passenger cells	74	
	Seat belts	74	
	Air bags	74	
	Controlling impact forces	75	Q5
	Where on Earth?	75	
	GPS navigation - How it works	76	Q6
	Worked example 1	77	
	Summary	78	
	Questions 1 - 2	78	

Unit 1	MECHANICS

		Page	
Chapter 7	WORK, ENERGY AND POWER	79	
	The idea of energy	79	
	Doing work, transferring energy	80	
	Calculating work done	80	
	Energy transferred	81	
	Newtons, metres and joules	81	Q1-3
	Force, distance and direction	81	
	Three examples involving gravity	82	Q4
	Worked example 1	83	Q5
	Gravitational potential energy	83	
	Worked example 2	83	
	An equation for gravitational potential energy	84	Q6-7
	Kinetic energy	84	
	Worked example 3	84	Q8-9
	Gravitational PE - KE transformations	85	
	Down, up, down - energy changes	86	
	Worked example 4	86	Q10-12
	Energy conservation	87	
	Energy transfers	88	
	Climbing bars	88	
	Worked example 5	89	
	Conserving energy	89	Q13
	Power	90	
	Units of power: the watt	90	
	Worked example 6	90	Q14-16
	Human power	91	
	Worked example 7	91	Q17
	Summary	92	
	Questions 1 - 3	93	

		Page	
Chapter 8	DEFORMING SOLIDS	95	
	Springy stuff	95	
	Compressive and tensile forces	96	
	Hooke's law	96	Q1
	Investigating springs	97	
	Stretching materials	97	
	Stress and strain	97	
	The Young modulus	98	Q2-6
	Determining the Young modulus	99	Q7
	Decribing deformation	100	
	Glass, cast iron	100	
	Copper, gold	101	
	Polythene, Perspex	101	Q8
	Strength of a material	102	
	Elastic potential energy	102	
	Worked example 1	104	Q10-12
	Summary	105	
	Questions 1 - 4	106
