

Physics 1 for OCR	[Textbook by Gurinder Chadha and David Sang]	
	ISBN	978-0-521-72455-5

Unit 2	ELECTRONS, WAVES AND PHOTONS
--------	------------------------------

		Page	
Chapter 9	ELECTRIC CURRENT	109	
	Developing ideas	109	
	Making a current	109	Q1-2
	Current and charge	111	
	Worked example 1	111	
	Worked example 2	111	Q3-6
	Charged particles	112	Q7
	Kirchhoff's first law	112	Q8-9
	An equation for current	113	
	Worked example 3	113	
	Slow flow	113	
	The mean drift velocity of electrons	114	Q10-12
	Summary	115	
	Questions 1 -4	115	

		Page	
Chapter 10	RESISTANCE AND RESISTIVITY	117	
	Electrical resistance	117	
	Worked example 1	117	Q1-2
	Defining the ohm	118	Q3-4
	Determining resistance	118	Q5
	The I-V characteristic	119	
	Ohm's law	119	Q6
	Resistance and temperature	120	Q7-8
	Thermistors	122	
	Thermistors at work	122	Q9-10
	Understanding the origin of resistance	123	Q11
	Resistivity	124	
	Worked example 2	125	Q12-15
	Resistivity and temperature	125	
	Summary	126	
	Questions 1 -4	126	

Unit 2	ELECTRONS, WAVES AND PHOTONS
--------	------------------------------

		Page	
Chapter 11	VOLTAGE, ENERGY AND POWER	129	
	The meaning of voltage	129	
	Voltage and energy	130	Q1-3
	Naming units	131	
	Electrical power	132	
	Worked example 1	132	Q4-5
	Fuses	132	
	Worked example 2	133	Q6
	Power and resistance	133	
	Worked example 3a	133	
	Worked example 3b	134	Q7-9
	Calculating energy	134	Q10-11
	Energy units (kilowatt-hour kWh)	134	Q12
	Summary	135	
	Questions 1 -4	136	

		Page	
Chapter 12	DC CIRCUITS	137	
	Circuit symbols and diagrams	137	
	Series circuits	138	
	Summarising	139	Q1-3
	Parallel circuits	139	
	Worked example 1	140	
	Summarising	140	Q4-7
	Solving problems	140	Q8-13
	Ammeters and voltmeters	142	Q14
	Summary	143	
	Questions 1 & 2	143	

		Page	
Chapter 13	PRACTICAL CIRCUITS	144	
	Internal resistance	144	Q1-3
	Determining electromotive force and internal resistance	145	Q4-5
	The effects of internal resistance	146	Q6
	Potential dividers	146	Q7
	Potential dividers in use	147	Q8-11
	Summary	149	
	Questions 1 & 2	150	

		Page	
Chapter 14	KIRCHHOFF'S LAWS	151	
	Circuit design	151	
	Revisiting Kirchhoff's first law	151	Q1-2
	Kirchhoff's second law	152	Q3
	Applying Kirchhoff's laws	153	
	Worked example 1	153	
	Signs and directions	154	
	e.m.f.s	154	
	p.d.s	154	Q4-5
	Conservation of energy	155	Q6-7
	Resistor combinations	156	
	Resistors in series	156	
	Resistors in parallel	156	Q8-9
	Summary	157	
	Questions 1 & 2	158	

Unit 2	ELECTRONS, WAVES AND PHOTONS
--------	------------------------------

		Page	
Chapter 15	WAVES	159	
	Vibrations making waves	159	
	Vibrations and time	159	
	Wave quantities	159	Q1
	Displacement, amplitude and wavelength	160	
	Longitudinal and transverse waves	161	
	Representing waves	161	
	Phase and phase difference	161	Q2
	Wave energy	162	
	Intensity	162	Q3
	Intensity and amplitude	162	
	Shock waves	163	Q4
	Wave speed	163	
	The wave equation	163	
	Worked example 1	164	Q5-8
	Waves in a ripple tank (Reflection)	165	
	Demonstrating Refraction (Using a Ripple Tank)	166	Q9
	Summary	167	
Questions 1 - 3	167		

		Page	
Chapter 16	ELECTROMAGNETIC WAVES	170	
	Light and electromagnetism	170	
	Electromagnetic radiation	171	
	The speed of light	171	Q1
	Orders of magnitude	171	Q2-5
	Using electromagnetic radiation	172	
	Ultraviolet hazards	173	
	The nature of electromagnetic waves	173	
	Polarisation	174	
	Polarised light	174	
	Effects that use polarisation of light	175	
	Polaroid sunglasses	175	
	Stresses in materials	175	
	Liquid-crystal displays	176	
	Malus' law	176	Q6-7
	Summary	177	
	Questions 1 - 3	177	

Unit 2 ELECTRONS, WAVES AND PHOTONS

		Page	
Chapter 17	SUPERPOSITION OF WAVES	179	
	Combining waves	179	
	The principle of superposition of waves	179	Q1
	Diffraction of waves	180	
	Diffraction of ripples in water	180	
	Diffraction of some other waves	181	
	Sound and light	181	
	Radio and microwaves	181	Q2
	Explaining diffraction	182	
	Interference	182	
	Explaining Interference	183	Q3
	Observing interference	183	
	In a ripple tank	183	
	Path difference	184	
	Interference of light	185	
	Interference of microwaves	185	Q4
	Coherence	186	Q5
	The Young double-slit experiment	187	
	Explaining the experiment	187	Q6
	Determining wavelength λ	188	
	Worked example 1	189	Q7
	Experimental details	189	Q8-10
	Diffraction gratings	190	
	Explaining the experiment	191	Q11
	Determining wavelength λ with a grating	191	
	Worked example 2	191	Q12-13
	Many slits are better than two	192	Q14
	Diffraction of white light (Dispersion)	192	Q15
	Summary	193	
	Questions 1 - 4	194	

		Page	
Chapter 18	STATIONARY WAVES	196	
	Nodes and antinodes	196	
	Formation of stationary waves	197	Q1
	Observing stationary waves	198	
	Stretched strings	198	Q2
	Microwaves	199	Q3
	Sound waves in air columns	200	Q4
	Stationary waves & musical instruments	200	
	Determining the wavelength and speed of sound (Kundt's dust tube)	201	Q5-6
	Eliminating errors	203	Q7
	Summary	204	
	Questions 1 - 4	204	

Unit 2 ELECTRONS, WAVES AND PHOTONS

Chapter 19	QUANTUM PHYSICS	Page	
	Making macroscopic models	206	
	Modelling with particles and waves	207	
	Particle models	207	
	Wave models	207	
	Waves or particles?	208	
	Particulate nature of light	208	
	Photons (Einstein relation)	209	Q1-4
	The electronvolt (eV)	210	Q5-7
	Accelerating a particle through a p.d.	210	Q8
	Estimating the Planck constant	211	Q9
	Threshold voltage		
	The photoelectric effect	212	
	Threshold frequency / Work function		
	The success of the photon model in explaining the photoelectric effect (Table)	215	Q10-13
	The nature of light - waves or particles?	215	
	Electron waves (de Broglie equation)	216	
	Electron diffraction	216	
	Worked example 1	217	
	Investigating electron diffraction	217	Q14
	People waves!	218	Q15
	Probing matter	218	
	The nature of the electron - wave or particle?	219	
	Summary	219	
	Questions 1 - 4	220	

Chapter 20	SPECTRA	Page	
	Light and atoms	223	
	Line spectra (Emission line spectra)	224	
	Absorption line spectra		
	Explaining the origin of line spectra	225	
	Energy levels	226	
	Photon energies	227	Q1-3
	Isolated atoms	228	
	Summary	229	
	Questions 1 & 2	229
