Princess Vulnavia presents ... Cloud 9; Revision Raindrops

Volume of a Solid

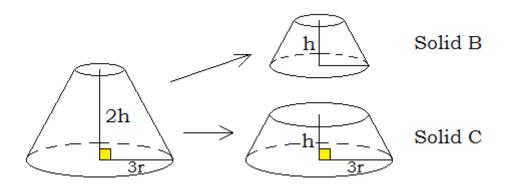

Raindrop 5c

A solid cone of perpendicular height 3h and base radius 3r is cut into three parts as follows.

Firstly, a cone of perpendicular height h and base radius r is cut off the top of cone.

Then a cut is made a right-angles to the axis of the fulcrum so that the perpendicular height of each solid is h.

Find, in its simplest form;

volume of shape A : volume of shape B : volume of shape C

The answer follows on the next page ...

Princess Vulnavia presents ... Cloud 9; Revision Raindrops

Raindrop 5c

Answer: volume of shape A: volume of shape B: volume of shape C

= 1 : 7 : 19
